Hello! I am a PhD Candidate at the University of Trento, Italy. In my PhD, I work on developing *crowdsourcing* and *hybrid crowd-machine learning algorithms* for document classification where documents must satisfy a set of predicates that can be verified by human or machines.

For instance, in systematic literature reviews, where candidate papers are screened based on a set of criteria to assess whether they are in scope for the review (e.g., predicate 1: "Does the paper describe an RCT study?", predicate 2: "Does the paper describes an experiment targeting older adults?").

Currently, I explore *active learning* and *reinforcement learning* to determine how artificial intelligence and crowdsourcing can benefit from each other to optimise the *accuracy vs money trade-off*.

In my projects I mostly use Python language and many py-tools, such as Scikit-learn, Keras, Pandas, NumPy, nltk, gensim, Matplotlib, iPython Notebook, etc.

I continuously learn by reading scientific papers, doing courses, and listening podcasts (Linear Digressions, TWiML&AI, AI in industry).

## My strength:

-Always seeking for new knowledge

## Hobbies:

- boxing  
- hiking

## Skills

### TECHNOLOGIES

Crowdsourcing	★★★★★
Python2*, 3*	★★★★★
Machine Learning	★★★★★
Statistics	★★★★★

### LANGUAGES

English (B2, IELTS academic)	★★★★★
Russian (native speaker)	★★★★★

---

## Education

**UNIVERSITY OF TRENTO (ITALY)**

Nov 2016 - present

**PhD Candidate, advisor Fabio Casati**

Research topic: cost-aware crowdsourcing and hybrid crowd-machine algorithms for screening documents that satisfy a set predicates (e. g., research topics) that can be verified by machine classifiers and/or crowd workers.

**BELARUSIAN STATE UNIVERSITY (BELARUS)**

2011 - 2016

**Specialist in Aerospace information systems and Radiophysics**

(5 years)

---

## Work Experience

**IBM Benelux, Amsterdam**

June 2018 -Aug 2018

**Active Learning Research Intern**

(3 months)

Designing active learning algorithms for document classification based on a set of predicates. Design adaptive strategies for determining how to optimally invest a given budget in the classification problem, where the best approach (crowdsourcing, AI, crowd+AI) for the dataset is unknown in advance.

**Pi School, Italy**

Oct 2017 - Dec 2017

**Deep Learning Intern**

(2 months)

Won a merit-based 15.000€ grant to attend Pi School of AI, 8 weeks long specialised school with classes and seminars on Machine Learning and Deep Learning, hands-on projects, and mentoring by researchers of the field. I have worked on a cyber-security project focused on Ransomware detection through the analysis of users activity. During the project, I communicated a lot with the customer company, processed and cleaned their data, built an RNN deep neural network.

**Purdue University (USA, IN)**

Jan 2016 - May 2016

**Crowdsourcing and Data Fusion Research Intern**

(4 months)

Developing methods for detecting confusions of observations in data fusion, i.e., when similar or neighbouring objects can be confused during the measurement of values, using an inference procedure based on Markov Chain Monte Carlo sampling.

**iTechArt Group, Belarus**

Feb 2015 - Sep 2015

**Junior Python Software Engineer**

(6 months)

- development endpoints for RESTful Web Services (Python, Django Web framework, Django REST framework)
- troubleshooting backend problems.

**Promwad Electronics Design, Belarus**

Aug 2014 - Feb 2015

**Junior Software Engineer**

(6 months)

Design and implementation embedded software for one board Linux computers, micro controllers.

---

---

## Organizational Skills

Founder of "Elective of mutual assistance" project at Belarusian State University. The goal of the project is to help undergraduate students to learn mathematical disciplines with assistance of senior students. Me and my team of 10 senior students have been organizing workshops, seminars, lectures. The project has been successfully working since 2012.
